

Deploying Kubernetes to Bare Metal using Cluster API

Introducing Sidero:

Secure, Automated Baremetal Lifecycle Management built on Cluster API.

Declarative Datacenter

```
apiVersion: metal.sidero.dev/v1alpha1
kind: Server
metadata:
  name: 00000000-0000-0000-0000-d05099d333e0
spec:
  cpu:
    manufacturer: Intel(R) Corporation
    version: Intel(R) Atom(TM) CPU C3558 @ 2.20GHz
```

```
apiVersion: metal.sidero.dev/v1alpha1
kind: ServerClass
metadata:
  name: default
spec:
  qualifiers:
    labelSelectors:
      - "my-server-label": "true"
```

All Sidero resources as standard Kubernetes Custom Resource Definitions (CRDs)

HELLO!

I am Seán McCord,
Software Engineer
at Talos Systems.

You can find me at
[@SeanCMcCord](#)

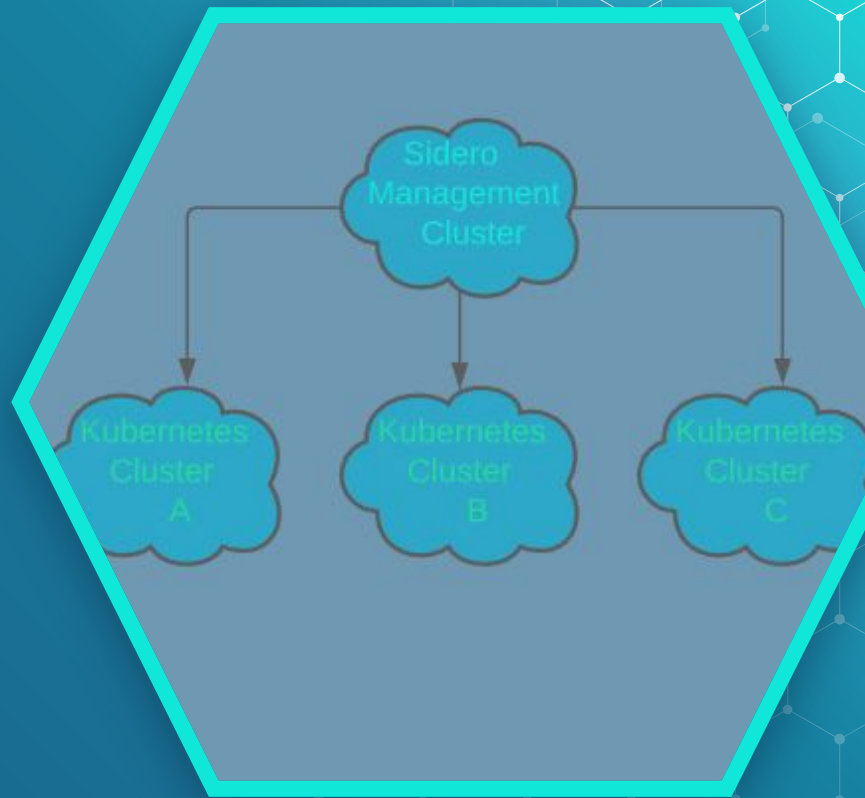

What is Sidero?

The anatomy

Sidero, the anatomy

Sidero creates Kubernetes clusters from a common pool of compute resources.

Sidero, the anatomy

- ◇ Open Source
- ◇ Kubernetes-based
- ◇ Cluster API (CAPI)
- ◇ Built on Talos
- ◇ Manifest-oriented
 - ◆ Version Control All

Sidero, the anatomy

- ◇ CRDs
 - ◆ Environments
 - ◆ Servers
 - ◆ ServerClasses
 - ◆ Metadata

Talos

The Kubernetes OS

Talos, the Kubernetes OS

- ◇ Modern Linux OS
- ◇ Secure, Immutable, Minimal
- ◇ No frivolous daemons or binaries
- ◇ No SSH
- ◇ No Shell
- ◇ Container-first and Kubernetes-oriented
- ◇ APIs everywhere!

APIs

Everywhere

Talos is controlled

- ◇ Completely by API
- ◇ Only by API

3

Sidero

The Features

Sidero, the Features

Automation

- ◇ PXE server
- ◇ TFTP server
- ◇ HTTP metadata
- ◇ IPMI client
- ◇ K8S controller

Dynamics

- ◇ Scale-up
- ◇ Scale-down
- ◇ Lifecycle
 - ◆ Disk wipe
 - ◆ Spec scape
 - ◆ Add/Del

Federation

- ◇ Hybrid cloud
- ◇ Other CAPI providers

DEMO

4

Sidero

The Demo

5

Sidero

The Future

Sidero, the Future

Autoscaling

- ◇ By Schedule
- ◇ By Load

API-driven DC

- ◇ High-level APIs
- ◇ Single-call clusters

Coordinated Crypto

- ◇ Key management
- ◇ Organization PKI

Edge Computing

- ◇ Distributed nodes
- ◇ Single-node clusters

6

End

The End
